Consolidate Table For Model Performance

CLASS	PRECISION	RECALL	F1-SCORE
0	0.819	0.847	0.833
1	0.978	0.973	0.975
2	0.736	0.862	0.794
3	0.849	0.905	0.876
4	0.825	0.758	0.79
5	0.938	0.96	0.949
6	0.75	0.608	0.671
7	0.924	0.942	0.933
8	0.967	0.961	0.964
9	0.964	0.932	0.948

Differences Between Deep Learning and Classical Machine Learning

1. Data size: Deep Learning requires a large amount of data to generalize properly while Classical ML only requires relatively a medium data size.

2. Complexity: Classical ML struggles with non linear data while Deep Learning is designed to handle non linearity in data.

3. Variance: A Deep Learning model can achieve low bias and low variance with a large dataset while Classic ML struggles with bias-variance tradeoff.

4. Tuning: Classical ML often has fewer hyperparameters. While, Deep Learning requires tuning of Learning rate Number of layers, Batch size and Optimizer for good generalization.

5. Hardware Requirements: Classical ML requires less intensive hardware while Deep learning requires GPUs with more power.
